

WHITEPAPER 1.0 | PGD Token

Mastertoken to Access, Community, Utility Architecture & more

1. Introduction and Basic Understanding

This whitepaper describes the planned access, community and utility architecture of PLAYGLOBAL Digital, as well as the role of the Mastertoken, technically referred to as the PGD Token.

PLAYGLOBAL Digital is designed as the digital access layer within the broader PLAYGLOBAL Hypersphere. Its purpose is to connect a qualified community through digital structures with selected information, platform functions, community mechanisms, loyalty models and future access opportunities within the PLAYGLOBAL Digital environment.

In this context, the PGD Token is intended as a community, access and utility token. It is designed to digitally position members within PLAYGLOBAL Digital, make their position recognizable through wallet-based identification, and provide access to the functions and content made available by PLAYGLOBAL Digital.

PLAYGLOBAL Digital must not be understood as separate from the existing PLAYGLOBAL Hypersphere. The PLAYGLOBAL Hypersphere already forms the overarching structure of real projects, digital layers, technology, Community Access and strategic development. Within this structure, PLAYGLOBAL Digital is positioned as the Community Access layer and is intended to make this access progressively visible, usable and expandable in digital form.

PLAYGLOBAL Digital, as a company, may develop its own strategic initiatives, partnerships, project connections, technological integrations, platform rights or corporate positions within the PLAYGLOBAL world. Such developments are established at the level of the PLAYGLOBAL Digital company. They may form the basis for PLAYGLOBAL Digital to provide additional information, community functions, loyalty benefits, access opportunities or utility mechanisms within its digital environment.

The Mastertoken does not provide any direct participation in PLAYGLOBAL Digital, in individual projects or in affiliated structures. Its function lies in digital affiliation with the PLAYGLOBAL Digital environment and in the use of those access, community and utility functions that PLAYGLOBAL Digital may provide in the course of its own development.

The long-term objective of PLAYGLOBAL Digital is to connect real project worlds, digital infrastructure, Community Access and modern platform functions. The Mastertoken serves as the digital access key within the PLAYGLOBAL Digital architecture.

2. Overview

PLAYGLOBAL Digital is the digital access and community layer of the broader PLAYGLOBAL Hypersphere. The Hypersphere describes the interaction between real projects, capital structures, technology partners and community functions within the PLAYGLOBAL world.

Within this model, PLAYGLOBAL Digital has a clear role: to create a digital environment through which a qualified community can be structurally connected with information, platform functions, access opportunities and future community value.

The Mastertoken, PGD, is the key to this environment. Its ownership positions a member within PLAYGLOBAL Digital and forms the basis for the community, information, platform and access functions described in this document.

The value of this position does not lie in any promised financial outcome, but in digital affiliation, structured information, platform access and the possibility to participate in the development of the PLAYGLOBAL Digital environment.

As PLAYGLOBAL Digital grows, the access, community and utility functions surrounding the Mastertoken are intended to be further developed. This distinguishes the Mastertoken from an isolated digital token: it is embedded in a broader corporate, technology and community architecture.

3. What the Mastertoken Is

The Mastertoken is the central digital access instrument within PLAYGLOBAL Digital.

It is designed as a community and access token and may, in particular, fulfill the following functions:

- digital positioning of a member within PLAYGLOBAL Digital;
- wallet-based recognition of the Mastertoken position;
- access to platform functions, community areas and information;
- foundation for future loyalty, access and utility mechanisms;
- possibility to be informed about selected developments within the PLAYGLOBAL Digital environment;
- technical basis for later digital functions through VALYGO and The Key.

The Mastertoken is therefore to be understood as a membership key within a digital access architecture. It opens access to the PLAYGLOBAL Digital environment and may acquire additional practical functions as the platform matures.

What lies behind individual future project, investment or offering structures will be separately defined, documented and legally treated. The Mastertoken itself remains the digital access instrument within PLAYGLOBAL Digital.

4. The Access, Community and Loyalty Model

Membership through the Mastertoken is intended to enable structured access within PLAYGLOBAL Digital. Depending on the technical, operational and regulatory development, this may include community membership, digital status, access to information, project updates, platform functions through The Key, community benefits, engagement functions and future access opportunities.

PLAYGLOBAL Digital is positioned as the Community Access layer within the existing PLAYGLOBAL Hypersphere. The PGD Token serves as the digital access instrument to this environment and may already be used for digital classification, information and community connection within PLAYGLOBAL Digital.

As the platform develops, additional access, utility, community or loyalty functions may be added. Such functions may be linked to actual platform usage, community activity, technical participation, status levels or other non-investment-related criteria defined by PLAYGLOBAL Digital.

PLAYGLOBAL Digital may develop loyalty and access mechanisms within its platform. Such mechanisms may recognize long-term or active Mastertoken holders based on their digital position, holding period, community activity or other defined criteria, and may provide them with additional information, digital functions, community benefits or access opportunities.

In this context, PLAYGLOBAL Digital may provide voluntary digital entitlements, access credits, community rewards, loyalty functions or comparable platform-related mechanisms. These serve the use, activation and further development of the PLAYGLOBAL Digital environment and are not to be understood as investment allocations, profit distributions or economic claims.

This logic follows a simple underlying principle: if PLAYGLOBAL Digital grows as a company, develops new structures, builds partnerships or expands platform functions, new opportunities may arise to involve the community more deeply within the PLAYGLOBAL Digital environment.

Access and entitlement are not equivalent to an automatic claim. Membership may entitle a holder to receive information or invitations relating to future developments. However, it does not guarantee any allocation, participation, pricing or economic outcome.

Each future project, product or offering defines its own rules. Each regulated structure follows its own legal process, its own documentation and its own participation requirements.

5. Future Projects and Separate Regulated Structures

PLAYGLOBAL develops and connects real projects. Over time, selected projects or project-related structures may be prepared for separate offerings.

To the extent such offerings have an investment character, they will not be represented through the PGD Mastertoken itself, but through independent legal and regulatory structures. Such instruments may, if and when issued, be separately structured, documented and offered by the relevant responsible company in accordance with the applicable regulatory framework.

The role of the Mastertoken in relation to such future structures lies in access and information. A member may, where permissible and provided for on a project-specific basis, be informed about a project or invited to review a separate offering.

Independently of any regulated investment structures, PLAYGLOBAL Digital may provide situation-dependent community, access, loyalty or utility mechanisms within its own platform environment. These may include voluntary digital entitlements, additional platform functions, community rewards, access credits, loyalty functions or comparable usage-related benefit structures.

Such mechanisms are provided voluntarily, for a defined purpose and within the respective technical, operational, regulatory and project-related requirements by PLAYGLOBAL Digital. They serve community involvement and the further development of the PLAYGLOBAL Digital environment. They do not constitute any participation, profit distribution, return, investment instrument or claim to economic results.

The Mastertoken itself does not convey any share in the economic structure of such offerings. This separation is deliberate and central to the concept of PLAYGLOBAL Digital: the PGD Token remains a community and access token, while any investment products are treated separately and independently from a regulatory perspective.

At the same time, the strategic intention of PLAYGLOBAL Digital remains visible. The company is intended to create a digital environment in which community, information, platform functions and selected future access paths can be structurally organized. The Mastertoken is the digital key to this environment, not the legal investment instrument itself.

6. Technology: VALYGO and The Key

PLAYGLOBAL Digital works with VALYGO as its technology partner. VALYGO is designed as a Layer-0 blockchain infrastructure and forms the technical basis for the digital representation of Mastertoken positions, wallet-based recognition and future access functions.

Within this structure, VALYGO is intended to support in particular:

- wallet-based visibility of Mastertoken positions;
- technical allocation of membership and access functions;
- the basis for future blockchain-based utility mechanisms;
- technical connection of possible digital entitlements, community functions or access modules.

Functions will be introduced step by step. Features that are still under development are described as planned and must not be understood as already operationally available.

The Key is the user-facing application of PLAYGLOBAL Digital. It is not itself a blockchain, but the digital access channel through which members can view their position, access information and use community functions.

The technical processing takes place in the background via VALYGO. The Key makes the relevant information visible, understandable and usable for users. The initial focus is on clearly displaying membership status, information and community content. Further functions may be added as the platform matures.

7. Tokenomics

The PGD Token is a community and access token with a fixed maximum total supply. The token economy is based on access, membership and platform participation within PLAYGLOBAL Digital.

Access to PLAYGLOBAL Digital is offered exclusively on a private, controlled and non-public basis. The structure serves the orderly development of the PLAYGLOBAL Digital community and the technical preparation of the platform functions.

Token Basic Data

Position	Description
Token name	PLAYGLOBAL Digital Master Token
Technical designation	PGD Token
Token type	Community and Access Token / Utility
Maximum total supply	300,000,000 PGD
Primary function	Digital access, community membership, platform participation
Infrastructure	VALYGO Layer-0 Blockchain
User interface	The Key application

Structured Allocation

The maximum total supply of 300,000,000 PGD is structurally allocated to different areas. This allocation serves the technical, organizational and operational planning of the PLAYGLOBAL Digital architecture.

Area	Tokens	Share	Purpose
Private Community Access	215,000,000	71.67%	Private access to the PLAYGLOBAL Digital community
Ecosystem & Future Reserve	10,000,000	3.33%	Reserve for future platform, technology and community functions
Social Responsibility	15,000,000	5.00%	Purpose-bound area for social, ecological, animal-related or community-related initiatives
Team & Operational Contributors	15,000,000	5.00%	Operational commitment and long-term contribution to the development of the platform
PLAYGLOBAL SA	15,000,000	5.00%	Strategic structural integration within the overall PLAYGLOBAL architecture
Marketing & Partners	30,000,000	10.00%	Community building, partner development, communication and regional structural development
Total	300,000,000	100.00%	Maximum total supply

The “Private Community Access” area describes the private access layer for selected participants within the PLAYGLOBAL Digital environment. This presentation is not to be understood as a public financing round, not as an investment phase and not as a statement regarding any expected value development of the PGD Token.

Access to PLAYGLOBAL Digital may be granted through a private membership or access contribution. The specific structure depends on the relevant onboarding process, the technical maturity of the platform, regional requirements and the applicable legal framework.

Strategic and reserve allocations support the long-term development of the platform, access and community structure. They may be used for technological development, community functions, partner development, communication, future platform mechanisms, ecosystem expansions or purpose-bound social or sustainable purposes. Release and usage rules for allocations that are not directly community-related serve operational order, technical platform development and protection of the community. They are not to be understood as investment vesting, founder participation or a capital-market-type release structure.

The use of operational, strategic or partner-related token areas may be linked to platform milestones, technical releases, community protection mechanisms, operational necessities or governance processes within PLAYGLOBAL Digital.

8. Controlled Community Phase

For the early life phase of the token, PLAYGLOBAL Digital follows a controlled, community-oriented approach. Transfers by members should generally only become possible after the private access processes have been completed and the platform has reached a defined technical release point.

The objective is an orderly launch of the community and platform functions, not permanent control.

During the early phase, the platform may apply protective measures to reduce misuse, multiple identities, bot activity, automated mass interactions or other non-community-compliant use. Such measures may include, in particular, technical checks, wallet allocations, identification logic, release stages, usage limits or time-limited transfer restrictions.

These rules serve the protection of the community, the technical integrity of the platform and the orderly introduction of the access functions. They are not to be understood as a guarantee of price, value, liquidity or economic outcome.

The controlled community phase is intended to ensure that PLAYGLOBAL Digital can introduce the initial platform, access and community functions in a transparent, fair and technically orderly manner. As the platform matures, broader and more independent usage or transfer rules may emerge, with responsibility gradually shifting more strongly to the members.

The specific design of such protection and release mechanisms depends on the development stage of the platform, the technical implementation, the size of the community, the security requirements and the applicable regulatory framework.

9. Roadmap

The roadmap describes the intended sequence of development and does not set fixed dates. Each stage is intended to prepare the next.

- Structure and Mastertoken foundation: Definition of the access architecture, company structure and token basic data.
- Private Access Phases: Development of the member community on a controlled, private basis.
- VALYGO Integration: Technical visibility and wallet allocation of the Mastertoken position.
- The Key: Introduction of the member application, beginning with information and status, followed by expansion into further functions.
- Access and Community Functions: Expansion of membership benefits, information areas, loyalty mechanisms and platform functions as PLAYGLOBAL Digital grows.
- Controlled Community Phase: Enabling orderly transfers after completion of the private phases and platform release.
- Regulatory Expansion: Addition of structures and approvals where activity, community size and functions require them.

A detailed time-based roadmap may be published separately on the website or presentations and updated if necessary.

10. Responsibility and Regulatory Approach

The protection of the community is a central principle of PLAYGLOBAL Digital. This is reflected in a clear utility positioning, private access phases, lock-up and purpose-bound release rules, a controlled early phase and the ongoing review of technical, operational and regulatory requirements.

Regulatory expansion is a step-by-step process. Structures and approvals are added in the markets and for those functions where they are required, according to actual activity, community size and the development stage of the platform.

PLAYGLOBAL Digital therefore follows not a rigid approach, but a development-oriented structure. Not every market and not every function requires the same regulatory step at the same time. What matters is that the structure is expanded responsibly in line with actual progress.

Any future investment products will be treated separately and structured under the applicable regulatory framework. They remain legally and functionally separate from the PGD community and access token.

11. Conclusion

PLAYGLOBAL Digital connects real projects, digital infrastructure and a qualified community in an access architecture within the PLAYGLOBAL Hypersphere.

The Mastertoken, PGD, 8st o8 digital key to this architecture. It is 8st o88 das a community, access and utility token and serves membership, information, digital positioning and platform participation within PLAYGLOBAL Digital.

The particular strength of PLAYGLOBAL Digital lies in the combination of corporate development, real project world, digital infrastructure, Community Access, VALYGO as the technological foundation and The Key as the user-facing access channel.

Future investment opportunities, 8st o8 extent they arise, will be represented in separate, regulated instruments. The role 8st o8 Mastertoken 8st o open access 8st o8 PLAYGLOBAL Digital environment and to gain practical usability as PLAYGLOBAL Digital develops.

This clear separation – access on one side, regulated investment structures on the other – 8st o8 foundation on which PLAYGLOBAL Digital is built.

The long-term objective of PLAYGLOBAL Digital 8st o make real structures digitally accessible, build community value and develop a scalable access architecture within the PLAYGLOBAL Hypersphere.

Final Legal Notice and Risk Warning

This whitepaper describes the planned access, community and utility architecture of PLAYGLOBAL Digital. It is a conceptual, technical and structural presentation and is not to be understood as a public offering, prospectus, investment advice, financial advice, legal advice or tax advice. PLAYGLOBAL Digital DAM Ltd., as the issuing entity of the PGD Token, reserves the right to amend, update, expand or further develop this Whitepaper, including the roadmap and any described platform, access, community, utility or compliance-related elements, in line with the ongoing development of PLAYGLOBAL Digital, its technology, regulatory requirements, strategic partnerships and operational needs. Any such amendments are intended to support the responsible and sustainable development of PLAYGLOBAL Digital, strengthen its long-term operational foundation and enhance the usability, functionality and overall benefit of the PLAYGLOBAL Digital environment for the company and its community.

The PGD Token is designed as a community, access and utility infrastructure within the PLAYGLOBAL Digital. It serves digital access to information, platform functions, community mechanisms, loyalty functions and future access opportunities within the PLAYGLOBAL Digital environment.

Any loyalty, access, bonus, community, reward or utility mechanisms within PLAYGLOBAL Digital serve the use, activation and further development of the PLAYGLOBAL Digital environment. They may be provided, adjusted, restricted or terminated by PLAYGLOBAL Digital voluntarily, for a defined purpose and according to technical, operational, regulatory or community-related criteria.

Such mechanisms do not create any claim to future allocations, any claim to tradable tokens, any claim to economic benefits, any participation, profit distribution, dividend, return or any other investment or financial right.

Ownership of the PGD Token does not create any automatic claim to future security tokens, regulated investment instruments, project allocations, participations or economic benefits. Any future investment opportunities within the PLAYGLOBAL world will, to the extent they are offered, be separately structured, separately documented and treated under the applicable legal and regulatory framework.

The token areas, allocations, release rules or usage rules described in the whitepaper serve the technical, organizational and operational structuring of PLAYGLOBAL Digital. They are not to be understood as a capital structure, financing round, investment vesting, participation model or basis for economic claims.

Any private access opportunities to PLAYGLOBAL Digital do not constitute a public placement, public offering or solicitation to invest. They serve exclusively private access to the PLAYGLOBAL Digital community, access and utility environment, to the extent permitted under the applicable legal and regulatory framework.

The PGD Token is not a security, not a financial instrument, not a share, not a bond, not an interest in a fund, not a fund unit, not an equity interest in any company and not a unit in a collective investment undertaking. Ownership of the PGD Token does not create any ownership interest, profit claim, dividend claim, interest claim, claim to revenues, repayment claim or direct claim to assets, capital or proceeds of PLAYGLOBAL, PLAYGLOBAL Digital, the PLAYGLOBAL Super Asset Fund, VALYGO or any affiliated company.

Jurisdictional Restrictions

Access to PLAYGLOBAL Digital is directed exclusively at a private, verified group of participants and not at the public. Participation is excluded for persons with residence, registered office, habitual residence, nationality or any other relevant connection to a jurisdiction in which access to, acquisition of, holding, use or transfer of the PGD Token would be unlawful, subject to authorization, restricted or connected with additional regulatory requirements under applicable law, unless such requirements have been fulfilled in advance.

This applies in particular to persons or legal entities from sanctioned, restricted, non-cooperative, high-risk or regulatorily excluded jurisdictions, as well as to persons whose participation would not be permissible under applicable sanctions, anti-money laundering, counter-terrorist financing, tax, capital markets, crypto, payment services, consumer protection or other regulatory rules. This may in particular concern jurisdictions listed on the then-current EU, FATF, UN, OFAC, UK, national or comparable international sanctions, AML/CFT, high-risk or tax cooperation lists. The same applies, where relevant, to U.S. persons as defined for purposes of Regulation S under the U.S. Securities Act of 1933, unless a separate, legally reviewed and permissible exemption or structure is provided.

Access to PLAYGLOBAL Digital requires a prior identity, compliance and eligibility review. This may be conducted in particular through the VALYGO platform, through valygo.com or through another onboarding or KYC/AML process approved by PLAYGLOBAL Digital. As part of this onboarding, it will be reviewed whether participation is permissible under the applicable legal, tax, regulatory, sanctions-related and compliance-related requirements.

PLAYGLOBAL Digital reserves the right to reject participants, restrict existing access, suspend access or terminate access where legal, regulatory, technical, compliance-related or risk-related reasons make this necessary.

A current assessment of excluded, restricted or review-required jurisdictions may be provided as part of the onboarding process, through the platform or through compliance procedures used by PLAYGLOBAL Digital and may be updated as necessary. The decisive criteria are not static country references in this whitepaper, but the legal, regulatory, sanctions-related and compliance-related requirements applicable at the time of onboarding, use or any subsequent review.

Transfer, usage or release restrictions during the early platform phase serve the protection of the community, technical integrity, misuse prevention and the orderly introduction of the platform functions. They are not to be understood as a measure to control a market price, secure a resale value or stabilize a tradable market.

No price increase, resale value, liquidity, listing, tradability or financial return of any kind is promised, implied or guaranteed. All information, structures, functions, roadmap elements and mechanisms reflect the current planning status and may be adjusted, postponed, expanded or not implemented if technical, operational, regulatory or economic reasons make this necessary.

Participation, where available, is offered exclusively on a private basis and is not directed at the public or at persons in jurisdictions in which such participation would be unlawful. Each participant is responsible for obtaining their own legal, tax, financial and regulatory advice before participating.
